

# PineApp™

## Solutions on KVM

### Quick Installation Guide

**December 2013**

The following manual provides assistance in installing PineApp product's Virtual Machine on KVM

## KVM OVERVIEW

Kernel-based Virtual Machine (KVM) is a hardware-assisted, fully virtualized solution for Linux on x86 hardware that contains virtualization extensions (specifically Intel VT or AMD-V). After you install KVM, you can run multiple guests (virtual machines), with each guest running a different operating system image. Each of these virtual machines has private, virtualized hardware, including a network card, storage, memory, and graphics adapter.

## INSTALLING PINEAPP VIRTUAL MACHINES WITH VIRT-MANAGER

The virt-manager application is a desktop user interface for managing virtual machines through libvirt. It primarily targets KVM VMs, but also manages Xen and LXC (linux containers). It presents a summary view of running domains, their live performance & resource utilization statistics. Wizards enable the creation of new domains, and configuration & adjustment of a domain's resource allocation & virtual hardware. An embedded VNC and SPICE client viewer presents a full graphical console to the guest domain.

1. Create a new Virtual machine on the virt-manager

**New VM**

Create a new virtual machine  
Step 1 of 5

Enter your virtual machine details

Name:

Connection:

Choose how you would like to install the operating system

Local install media (ISO image or CDROM)

Network Install (HTTP, FTP, or NFS)

Network Boot (PXE)

Import existing disk image

2. Create use iso image , browse and select proper solution image file

**New VM**

Create a new virtual machine  
Step 2 of 5

Locate your install media

Use CDROM or DVD

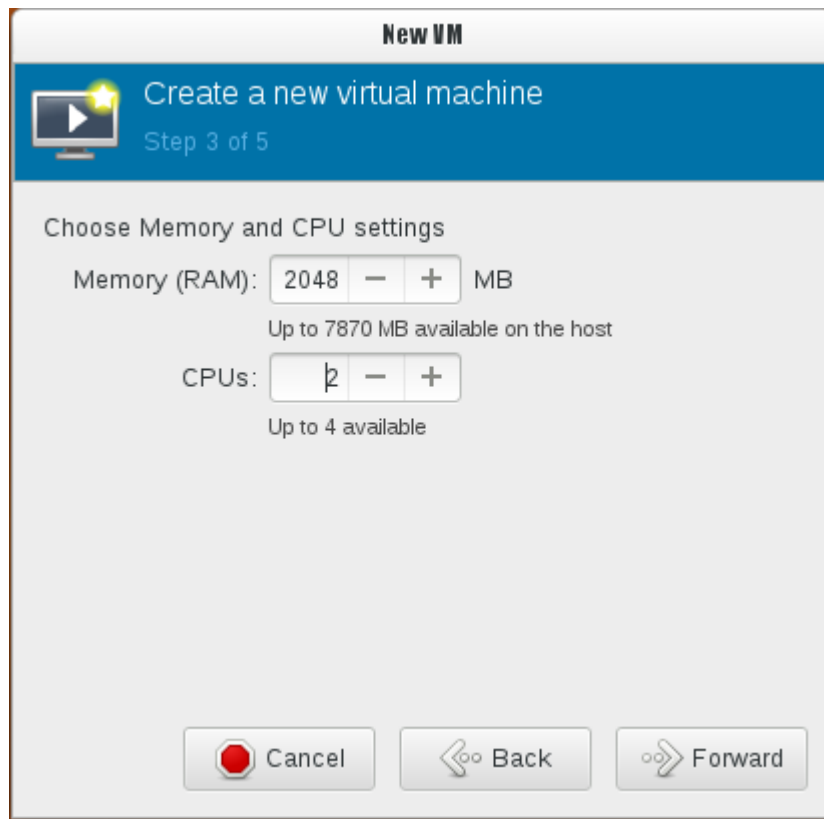

Use ISO image:

Choose an operating system type and version

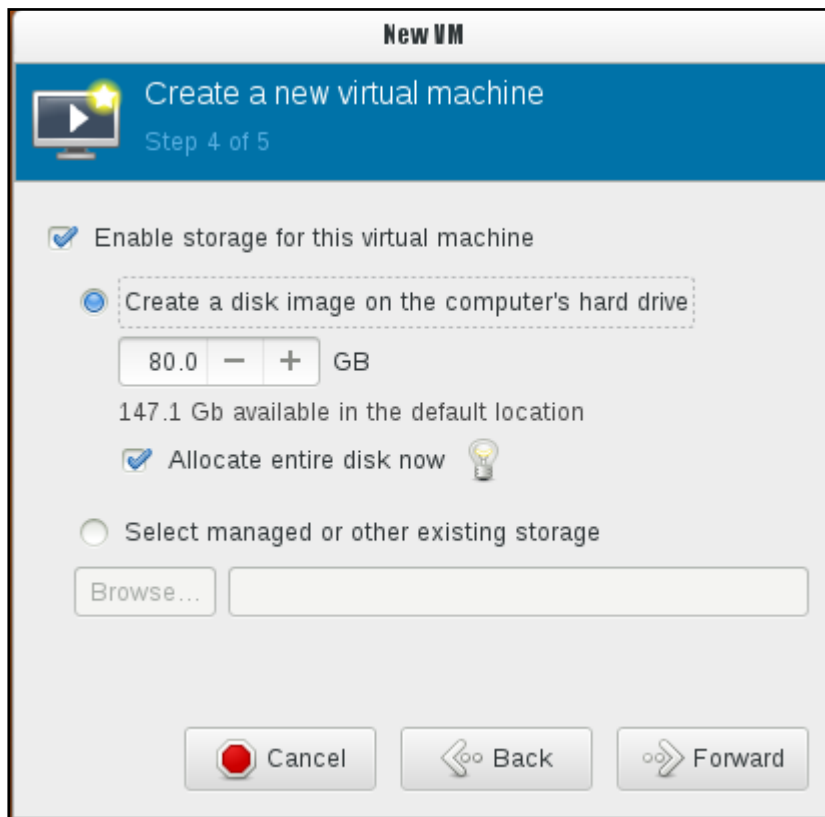

OS type:

Version:

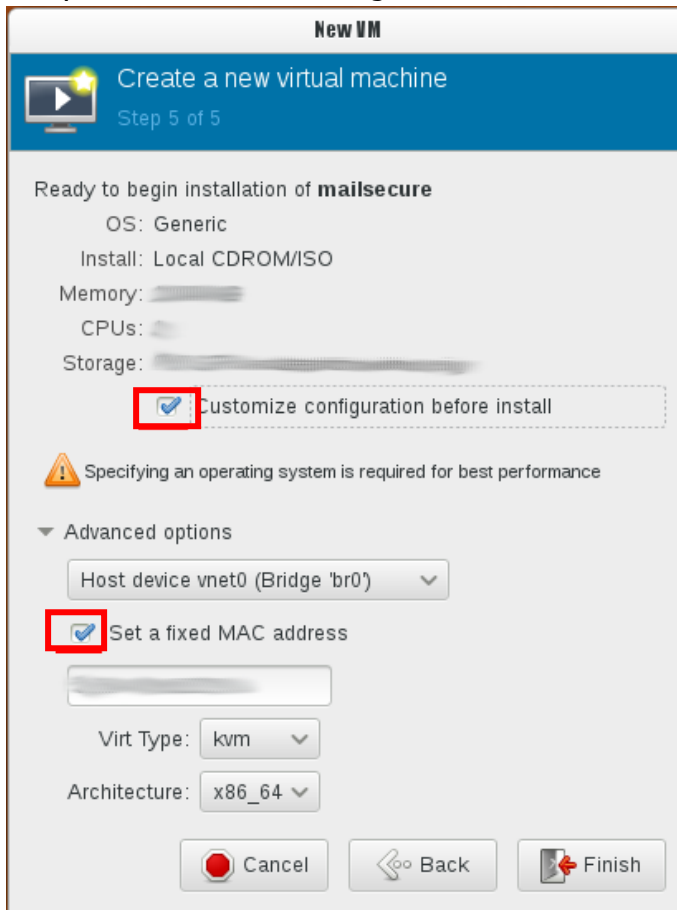

- Please choose appropriate memory and CPU cores for the indented machine, Visit PineApp website software and virtual machine datasheet for proper sizing .

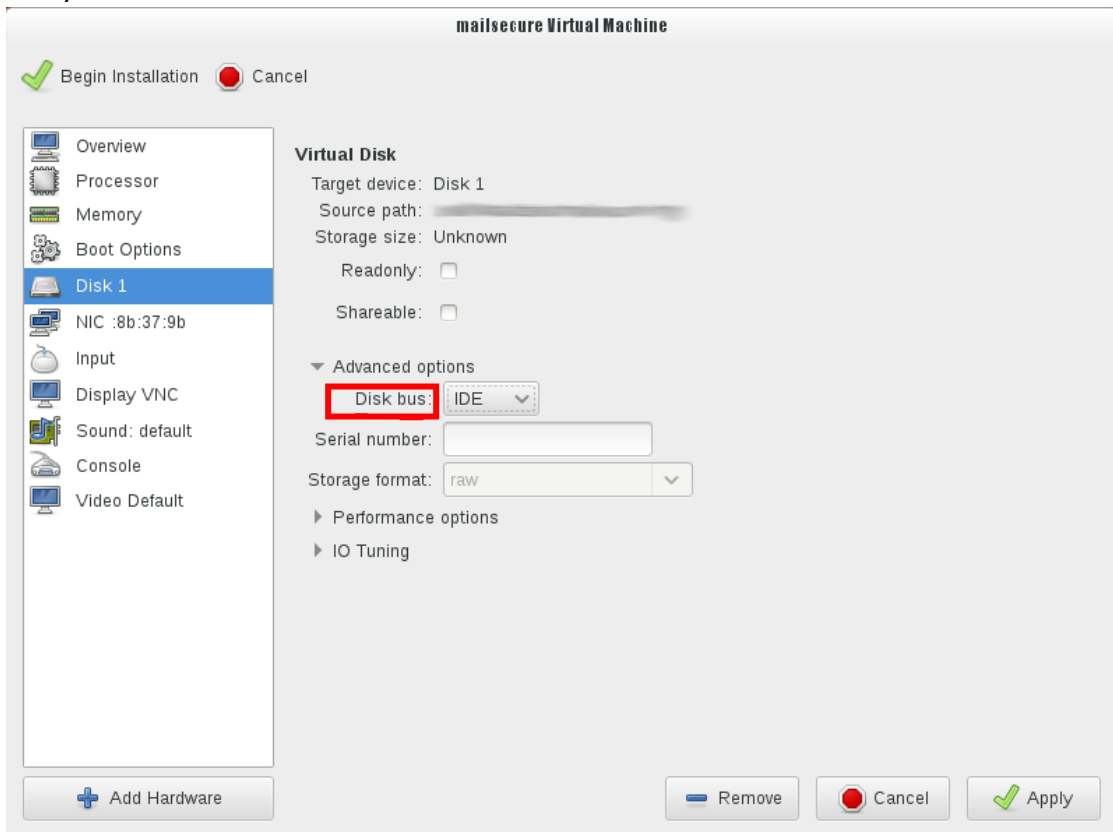

- Please choose appropriate disk drive space for the indented machine, Visit PineApp website software and virtual machine datasheet for proper sizing

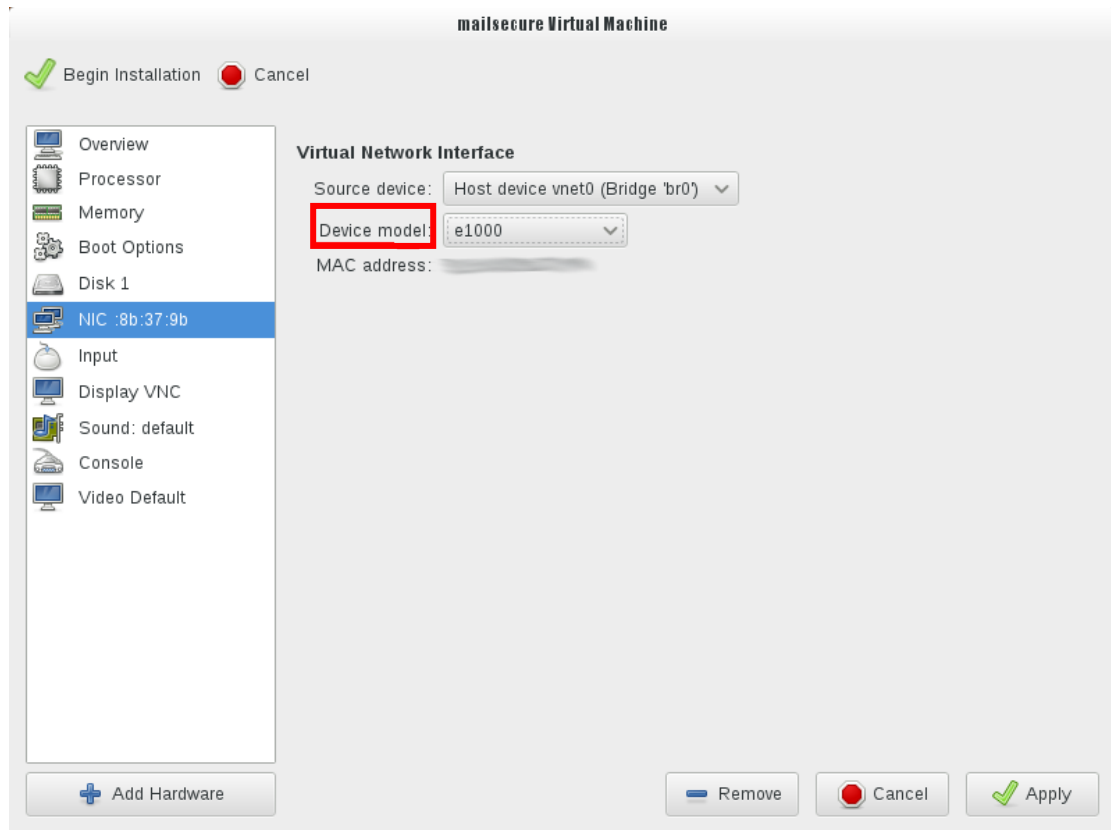

5. Verify that "Customize configuration before install" & " set a fixed MAC address are selected

6. Verify Virtual Disk bus is set to IDE

## 7. Verify network card device mode is set to e1000

For further information and installation procedures for Mail-SeCure, and Surf-SeCure, please refer to each product's corresponding quick installation guide and/or user manual.

For further information and/or questions, please contact PineApp's support at [Support@pineapp.com](mailto:Support@pineapp.com), or by phone at +972-4-8213121 x 3.
